

VERVEKA ELECTROLYTES MIX

Supplementary feed for calves.

Verveka Electrolytes Mix contributes to the recovery of, or the prevention of dehydration caused by digestive disorders or transport stress for young calves.

Ingredients:

Dextrose, sodium chloride, sodium bicarbonate, potassium chloride, yeast extract.

Analytical contents:

Crude protein	0,0%
Crude fat	0,0%
Crude fibre	0,0%
Crude ash	32,0%
Sodium (Na)	10%

At the first sign of digestive problems start as quick as possible by giving Verveka Electrolytes Mix.

1kg Verveka Electrolytes Mix dissolved in 60 liters of water.

1kg of Verveka Electrolytes Mix dissolving in water of 65°C and then mixing to 60 liters with a serving temperature of 42 °C.

Repeat this at the next feeding round(s). After improvement slowly switch to milk replacers for calves supplemented with 10gr Verveka Electrolytes Mix per liter of milk.

Store in cool and dry place.

This product is GMP+ assured.
